4 recalls listed by Transport Canada for this model year

Seats and restraints

2026003 5 Jan 2026

Issue: On certain vehicles converted for wheelchair access by Vantage Mobility, the wheelchair tie-down retractors may not have been manufactured properly. As a result, the retractor(s) may not lock automatically. If this happens, the wheelchair may not be secured correctly and could move in a crash. Note: This recall only affects certain Q'Straint QRT-DELUXE and QRT-MAX wheelchair retractors with the part number Q8-6200 or Q8-6209. Safety Risk: A wheelchair that moves in a crash could increase the risk of injury. Corrective Actions: To reduce the safety risk, Vantage Mobility recommends you confirm the wheelchair is secured properly by attempting to move it before driving until the recall repairs have been completed. Vantage Mobility will notify owners by mail and advise you to take your vehicle to a Vantage Mobility service center to inspect and, if necessary, replace the wheelchair retractor(s).

Seats and restraints

2025070 13 Feb 2025

Issue: On certain vehicles, the bolts that secure the third-row seats may not have been tightened properly. As a result, the seats could move in a crash. Safety Risk: A seat that moves in a crash could increase the risk of injury. Corrective Action: Toyota will notify owners by mail and advise you to take your vehicle to a dealership to tighten the bolts for the third-row seats.

Airbag

2023684 20 Dec 2023

Issue: On certain vehicles, a sensor for the occupant classification system (OCS) may not have been manufactured properly. As a result, the sensor could short circuit and cause the airbag system to turn off the passenger-front airbag even when a passenger is seated. Note: This problem would cause a warning message to display on the instrument panel and the airbag indicator light would display "passenger airbag off". Safety Risk: An airbag that is turned off could increase the risk of injury to a passenger in a crash. Corrective Actions: Toyota will notify owners by mail and advise you to take your vehicle to a dealership to inspect and, if necessary, replace the OCS sensor.

Brakes 2022179 13 Apr 2022

Issue: Under certain conditions, the vehicle stability control (VSC) system may not switch on when the ignition is restarted. This can happen if the driver manually turns off the VSC, depresses the brake pedal, and then turns off and restarts the vehicle while continuously depressing the brake pedal. Canadian regulations require the stability control system to be active each time that you start the vehicle. Safety Risk: A stability control system that is switched off could increase the risk of a crash. Corrective Actions: The company will notify owners by mail and instruct you to take your vehicle to a dealer to update the skid control ECU software.

> Listed for the model year, not checked against your VIN. Toyota confirms which apply.

SOURCES

[1] Cardog identity register, decoded from the VIN
[2] Transport Canada recall database, listed for the model year
[3] NHTSA recall records (United States), listed for the model year
[4] Cardog market quote, same configuration, 25 live listings, as of 26 Nov 2026
[5] Live public dealer listings on Cardog, as of 26 Nov 2026

STATEMENT OF SCOPE

This record is what public sources held about this vehicle when Cardog read it, each fact cited to its source. It read the VIN decode, Transport Canada's recall listing, NHTSA's recall records, Cardog's market quote and live public dealer listings. Recalls are listed for the model year, not checked against this VIN; the manufacturer confirms which apply. It is not a vehicle history or ownership report, and it carries no owner information.
