1 recall listed by Transport Canada for this model year

Steering

2025592 29 Oct 2025

Issue: On certain vehicles, the wheel hub nuts, outer tie rod nuts, front lower ball joint nuts, upper control link nuts and/or axle bracket bolts may not have been tightened properly. As a result, the fasteners could loosen and detach. If this happens, there could be a loss of power to the wheels, a loss of control and/or parts could separate from the vehicle. Note: This problem could cause unusual noises from the front of the vehicle when steering and/or driving over bumps. Safety Risk: A loss of power to the wheels and/or a loss of control could increase the risk of a crash. Additionally, parts that separate from the vehicle could create a road hazard for others and increase the risk of a crash. Corrective Actions: To reduce the safety risk, Mazda advises you to visually inspect the alignment of the front wheels before driving until the recall repairs have been completed. Mazda will notify owners by mail and advise you to take your vehicle to a dealership to inspect and tighten or replace the fasteners, as necessary.

Listed for the model year, not checked against your VIN. Mazda confirms which apply.
