On certain vehicles, water may drain from the windshield cowl area onto the front wiper link ball joint. Over time, this could result in corrosion and/or wear to the joint, which could result in the separation of the wiper link ball. If separation were to occur, the windshield wipers could become inoperative, which could limit the driver's visibility under certain operating conditions which may increase the risk of a crash causing injury and/or damage to property. Correction: Dealers will replace the wiper link rod with a countermeasure one, and will replace the wiper motor crank arm with a new one.

Engine

2017475 29 Sep 2017

On certain vehicles, defective electrical relays may have been installed in the power distribution center. This could cause various electrical circuits to fail, potentially resulting in engine stalling, reduced engine power, or loss of engine cooling fan function potentially resulting in engine overheating. These issues could increase the risk of a crash causing injury and/or damage to property. Correction: Dealers will replace affected relay(s) with updated parts.

Powertrain

2016379 27 Jul 2016

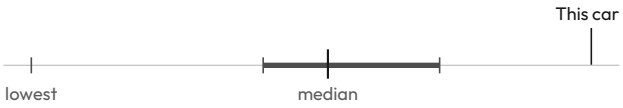

On certain vehicles equipped with a continuously variable transmission (CVT), the range switch could momentarily experience a loss of signal. If this occurs, the driver may experience an unexpected reduction of vehicle acceleration which could, in conjunction with traffic, road conditions and the driver's reactions, increase the risk of a crash causing injury and/or damage to property. Correction: Dealers will reprogram the CVT-ECU.
