On certain vehicles, water may drain from the windshield cowl area onto the front wiper link ball joint. Over time, this could result in corrosion and/or wear to the joint, which could result in the separation of the wiper link ball. If separation were to occur, the windshield wipers could become inoperative, which could limit the driver's visibility under certain operating conditions which may increase the risk of a crash causing injury and/or damage to property. Correction: Dealers will replace the wiper link rod with a countermeasure one, and will replace the wiper motor crank arm with a new one.

On certain vehicles operated in areas of heavy road salt usage, a mixture of snow, water and road-salt solution may infiltrate between the front impact sensor and the bracket that attaches it to the vehicle. Over time, repeated freezing/thawing cycles could cause a crack to develop in the sensor case allowing water intrusion and short circuit of the sensor. In the event of a crash, this could result in delayed deployment of the driver and passenger front airbags which would increase the risk of injury. Correction: Dealers will inspect the front impact sensor and replace it if it is found to be cracked. An updated designed bracket and cover will also be installed.

STATEMENT OF SCOPE

This record is what public sources held about this vehicle when Cardog read it, each fact cited to its source. It read the VIN decode, Transport Canada's recall listing, Cardog's market quote and live public dealer listings. Recalls are listed for the model year, not checked against this VIN; the manufacturer confirms which apply. It is not a vehicle history or ownership report, and it carries no owner information.
