2 recalls listed by Transport Canada for this model year

Airbag

2016046 1 Feb 2016

On certain vehicles, the driver frontal airbag inflator could produce excessive internal pressure during airbag deployment. Increased pressure may cause the inflator to rupture, which could allow fragments to be propelled toward vehicle occupants, increasing the risk of injury. This could also damage the airbag module, which could prevent proper deployment. Failure of the airbag to fully deploy during a crash (where deployment is warranted) could increase the risk of personal injury to the seat occupant. Correction: Dealers will inspect/replace the driver's frontal airbag inflator. Note: Honda Canada has created a special Airbag Inflator Hotline for immediate assistance. Engine

2011329 7 Sep 2011

On certain vehicles equipped with a manual transmission, specific operating conditions (such as extreme temperatures, combined with high battery and accessory loads, and operation near engine stalling speeds), could allow the Engine Control Unit (ECU) to activate the engine stall prevention assist software which, in turn, could inadvertently command the hybrid system's electric motor to rotate the engine in the opposite direction, causing the vehicle to move in the reverse direction of that expected. This could result in a crash causing property damage and/or personal injury. Correction: Dealers will update the ECU software.

STATEMENT OF SCOPE

This record is what public sources held about this vehicle when Cardog read it, each fact cited to its source. It read the VIN decode, Transport Canada's recall listing, NHTSA's recall records, Cardog's market quote and live public dealer listings. Recalls are listed for the model year, not checked against this VIN; the manufacturer confirms which apply. It is not a vehicle history or ownership report, and it carries no owner information.
