3 recalls listed by Transport Canada for this model year

Structure

2016431 6 Sep 2016

On certain vehicles, the anti-corrosion treatment of the outer tube of the rear lift gate stay may be insufficient. Over time, the outer tube of the rear lift gate stay may corrode and break off, which could increase the risk of injury. Correction: Dealers will replace both rear door stays.

Suspension

2016152 8 Apr 2016

On certain vehicles, the nut and bolt holding the strut assembly to the knuckle may not have been tightened properly during the manufacturing process. Over time, this could cause the strut assembly to separate from the knuckle, resulting in a loss of steering control which would increase the risk of a crash causing injury and/or damage to property. Correction : Dealers will inspect and replace the nut and bolt holding the strut assembly to the knuckle if found loose.

Fuel system

2016049 1 Feb 2016

Certain vehicles fail to comply with the requirements of Canada Motor Vehicle Safety Standard 301 – Fuel System Integrity. During rear impact crash testing, the fuel filler pipe ruptured, causing fuel spillage exceeding the limit specified by the standard. As a result, a collision involving the rear of the vehicle could result in a fuel leak. Fuel leakage, in the presence of an ignition source, could result in a fire causing injury and/or property damage. Correction: Dealers will remove a bolt on the left rear side member attaching the bracket to the fuel filler pipe. This will change the load path during a rear crash impact preventing filler pipe rupture.
