Airbag

2018585 25 Oct 2018

On certain vehicles, long-term exposure to high absolute humidity and temperature, combined with high temperature cycling, could eventually degrade the propellant contained in the passenger frontal airbag. This could cause the airbag to deploy with more force than normal. As a result, if the vehicle were involved in a collision that warrants airbag deployment, fragments could be propelled toward vehicle occupants, and the airbag assembly could be damaged, preventing proper function. These issues could increase the risk of injury. Correction: Dealers will replace the passenger frontal airbag inflator. Note: Canadian climate results in the propellant degrading slowly. The recall is being conducted as a precaution to address future risk, and is expected to replace airbag inflators before their function would be affected. Additional Note: This is an expansion of recall 2018-030.

Suspension

2016152 8 Apr 2016

On certain vehicles, the nut and bolt holding the strut assembly to the knuckle may not have been tightened properly during the manufacturing process. Over time, this could cause the strut assembly to separate from the knuckle, resulting in a loss of steering control which would increase the risk of a crash causing injury and/or damage to property. Correction : Dealers will inspect and replace the nut and bolt holding the strut assembly to the knuckle if found loose.
