2 recalls listed by Transport Canada for this model year

Lights and instruments

2019617 11 Dec 2019

Issue: On certain vehicles, a short circuit could occur in the main display of the combination meter. This could cause the vehicle speed and fuel level to disappear from the main display while driving. Safety Risk: A vehicle that does not display the fuel level could have an increased risk of running out of fuel. If vehicle speed is not displayed, it could result in the vehicle being driven at higher speed than intended. This could increase the risk of a crash. Corrective Actions: Toyota will notify owners by mail and instruct you to take your vehicle to a dealer to inspect the combination meter circuit board. It will be replaced if necessary.

Brakes

2019360 24 Jul 2019

Issue: On certain vehicles, a defect could cause the brake booster pump to fail. This could result in a loss of braking assist. If the failure occurs, the driver will be provided with both visual and audible warnings. It would also cause the Vehicle Stability Control system to turn off. Safety Risk: A loss of braking assist could cause extended stopping distances and increase the risk of a crash. A loss of Vehicle Stability Control would cause the vehicle to not meet the requirements of Canadian regulations, and could increase the risk of a crash. Corrective Actions: The company will notify owners by mail and instruct them to take their vehicle to a dealer to inspect, and if necessary, replace the brake booster pump.
