## 3 recalls listed by Transport Canada for this model year

### Fuel system 2020514 28 Oct 2020

Issue: On certain vehicles, the low-pressure fuel pump could fail. If this happens, then engine may run rough or may not start and the check engine light may turn on. This could also result in a sudden loss of engine power while driving. Note: This recall is an expansion of recalls SRC R95/SRC R96 and SRC RA2/SRC RA3 (Transport Canada Recall Numbers 2020-005 and 2020-088). Safety Risk: A sudden loss of engine power could increase the risk of a crash. Corrective Actions: The company will notify owners by mail and instruct you to take your vehicle to a dealer to replace the fuel pump.

### Fuel system 2018091 14 Feb 2018

On certain vehicles equipped with a 5.0L V8 gasoline engine, a fatigue crack could develop on the cover of the high pressure fuel pump. If the vehicle is operated with this condition, the crack could expand and allow fuel to leak. Leaking fuel in the presence of an ignition source could result in a fire, increasing the risk of injury and/or damage to property. Correction: Dealers will replace the high pressure fuel pumps with improved ones.
