2 recalls listed by Transport Canada for this model year

Powertrain

2021735 7 Dec 2021

Issue: On certain Ioniq EV models, the vehicle could accelerate after the accelerator pedal is released. Note: This problem can only happen under certain conditions after the vehicle enters "fail-safe" mode. Safety Risk: A vehicle that continues to accelerate could create the risk of a crash. Corrective Actions: Hyundai will notify owners by mail and instruct you bring your vehicle to a dealer to update the electric power control unit (EPCU) software. The dealer will also add additional ground wiring between the drive motor/gear assembly and frame.

Wheels

2019498 7 Oct 2019

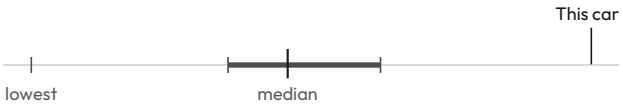

Issue: On certain cars, the wheel lug nuts were not properly tightened during assembly. This could cause the nuts to loosen or fall off, and could result in a wheel separating from the car. Note: For the Ioniq model, this recall only involves the Ioniq PHEV (Plug-In Hybrid Electric Vehicle) version. Safety Risk: A wheel separation could increase the risk of a crash. A wheel that detaches from a vehicle could create a hazard for other drivers and nearby people. Corrective Actions: The company will notify owners by mail and instruct them to take their car to a dealer to ensure the front and rear wheel nuts are properly tightened.
