2 recalls listed by Transport Canada for this model year

Powertrain

2025104 2 Mar 2025

Issue: On certain vehicles, the front axle shafts may not have been installed properly. As a result, the front axle shaft(s) could become damaged and/or separate from the transmission, and cause a sudden loss of power to the wheels. Additionally, if the vehicle is parked and the parking brake isn't applied, the vehicle could roll away. Note: This recall only affects vehicles equipped with a 6-speed automatic transmission. Safety Risk: A loss of power to the wheels could increase the risk of a crash. A parked vehicle that moves suddenly could create a risk of a crash or an injury. Corrective Actions: Ford will notify owners by mail and advise you to take your vehicle to a dealership to inspect and, if necessary, replace the axle shaft(s).

Engine

2023704 22 Dec 2023

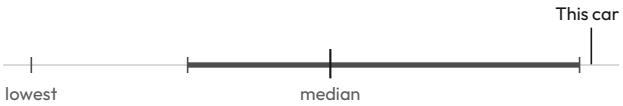

Issue: On certain vehicles, the engine oil pump tensioner and/or the engine oil pump drive belt could fail and cause a loss of engine oil pressure. If this happens, the engine could fail and cause a loss of power to the wheels and a loss of power braking assist. Note: This recall only affects vehicles equipped with a 1.0L engine. Safety Risk: A sudden loss of power to the wheels could increase the risk of a crash. A loss of power brakes can cause an increase in brake pedal force and lead to an increase in stopping distance. Corrective Actions: Ford will notify owners by mail and advise you to take your vehicle to a dealership to inspect and, if necessary, replace the oil pump drive belt tensioner assembly. The dealer will also replace the oil pump drive belt.
