2 recalls listed by Transport Canada for this model year

Powertrain

2025104 2 Mar 2025

Issue: On certain vehicles, the front axle shafts may not have been installed properly. As a result, the front axle shaft(s) could become damaged and/or separate from the transmission, and cause a sudden loss of power to the wheels. Additionally, if the vehicle is parked and the parking brake isn't applied, the vehicle could roll away. Note: This recall only affects vehicles equipped with a 6-speed automatic transmission. Safety Risk: A loss of power to the wheels could increase the risk of a crash. A parked vehicle that moves suddenly could create a risk of a crash or an injury. Corrective Actions: Ford will notify owners by mail and advise you to take your vehicle to a dealership to inspect and, if necessary, replace the axle shaft(s).

Engine

2023704 22 Dec 2023

Issue: On certain vehicles, the engine oil pump tensioner and/or the engine oil pump drive belt could fail and cause a loss of engine oil pressure. If this happens, the engine could fail and cause a loss of power to the wheels and a loss of power braking assist. Note: This recall only affects vehicles equipped with a 1.0L engine. Safety Risk: A sudden loss of power to the wheels could increase the risk of a crash. A loss of power brakes can cause an increase in brake pedal force and lead to an increase in stopping distance. Corrective Actions: Ford will notify owners by mail and advise you to take your vehicle to a dealership to inspect and, if necessary, replace the oil pump drive belt tensioner assembly. The dealer will also replace the oil pump drive belt.

Listed for the model year, not checked against your VIN. Ford confirms which apply.
