2 recalls listed by Transport Canada for this model year

Label 2019472 26 Sep 2019

Issue: On certain cars fitted with 18-inch rear tires, the tire placard label shows the wrong rear tire size. Canadian regulations require the correct tire size to be listed on the tire placard. If the car is fitted with the incorrect rear tires, it may not handle as designed. Safety Risk: A change in vehicle handling characteristics could increase the risk of a crash. Corrective Action: The company will notify owners by mail and instruct them to take their car to a dealer to install a corrected tire placard label.

Engine 2019028 17 Jan 2019

Issue: On certain vehicles, the engine crankshaft pulley bolt may have been manufactured improperly. This could cause it to crack and fail. If this happens, the crankshaft could break and cause a sudden engine failure. A driver may hear loud noises and see warning lights on the dash immediately before the engine fails. Safety Risk: An engine failure could increase the risk of a crash. Additionally, a loose pulley could separate from the engine and cause damage. If it separates from the vehicle, it could become a hazard for bystanders or other drivers. Corrective Actions: The company will notify owners by mail. Owners will be instructed to take their vehicle to an authorized repair facility to have the crankshaft pulley bolt replaced with a new one.
