2 recalls listed by Transport Canada for this model year

High voltage

2026442 17 Sep 2026

Issue: On certain vehicles, the DC/DC converter could fail. As a result, the 12 V battery would not charge and a red "Stop Safely Electrical Fault Detected" warning message would be displayed. If this happens, and you continue to drive the vehicle, there could be a loss of power to the wheels and/or the vehicle's lights could turn off. Note: This recall is an expansion of Transport Canada recall no. 2026-196. Vehicles repaired under that recall don't require this repair. This recall only affects certain mild hybrid electric vehicles (MHEV). Safety Risk: A loss of power to the wheels could increase the risk of a crash. Exterior lights that don't work may make the vehicle less visible to others and increase the risk of a crash. Corrective Actions: Land Rover will notify owners by mail and advise you to take your vehicle to a dealership to update the vehicle load balancing software.

Seats and restraints

2022392 21 Jul 2022

Issue: On certain vehicles, the driver and front passenger seat belt pretensioners could be damaged. As a result, the seat belt pretensioners may not work properly in a crash. Safety Risk: A seat belt pretensioner that does not work properly could increase the risk of injury in a crash. Corrective Actions: Land Rover will contact owners by mail and instruct you to bring your vehicle to a dealership to inspect the front seat belt pretensioner tubes for damage. The dealer will replace the driver and front passenger seat belt retractors, if necessary.
