7

 recalls listed by Transport Canada for this model year

Structure

2025027 23 Jan 2025

Issue: On certain vehicles, the doors may not latch properly when they are closed. As a result, the doors could open while driving. Safety Risk: A door that opens suddenly while driving could create the risk of injury and/or increase the risk of a crash. Corrective Actions: Land Rover will notify owners by mail and advise you to take your vehicle to a dealership to update the unlatch keyless vehicle (KV) software.

Suspension

2022668 23 Nov 2022

Issue: On certain vehicles, the front suspension knuckles could crack and/or break. A front knuckle that breaks while driving could cause a sudden loss of vehicle control. Safety Risk: A loss of vehicle control could increase the risk of a crash. Corrective Actions: Land Rover will notify owners by mail and instruct you to take your vehicle to a dealership to inspect the front suspension knuckles. If the batch code stamped on the knuckle is within the affected range, and it isn't cracked, the dealership will install a retaining bracket. If cracks are found, the dealership will replace the knuckle(s).

Structure

2015259 11 Jun 2015

On certain vehicles, if doors fail to latch properly in the primary or secondary closed position, there would be no indication provided to vehicle occupants of the unlatched door condition. This could result in a door opening while the vehicle is in motion, which could increase the risk of injury to a vehicle occupant seated next to the door, or result in damage to property. Correction: Dealers will update the vehicle software.

Airbag

2015077 19 Feb 2015

Certain vehicles may not comply with the requirements of Canada Motor Vehicle Safety Standard (CMVSS) 208 – Occupant Protection. The passenger seat occupant classification system (OCS) may have been calibrated incorrectly during the manufacturing process. This could result in the non-deployment of an airbag, which would increase the risk of injury to the seat occupant in a crash where airbag deployment is warranted. Correction: Dealers will reprogram the occupant classification system (OCS).

Brakes

2015028 26 Jan 2015

On certain vehicles, the brake vacuum hose may not have been routed properly and could rupture, causing a loss of vacuum assistance in the braking system. This could increase stopping distances, which could result in a crash causing injury and/or damage to property. Correction: Dealers will inspect and re-route or replace the hose if damaged.

Accessories

2014436 3 Oct 2014

On certain vehicles, a fault in the tire pressure monitoring system (TPMS) could impair the vehicle's ability to determine the location of the individual tire pressure monitoring sensors. This would render the system inactive, displaying a "TPMS system fault" message on the instrument cluster. An inoperative TPMS could allow underinflated tires to go unnoticed by the driver, which could affect vehicle stability and increase the risk of a crash causing injury and/or damage to property. Correction: Dealers will update vehicle software.

- | | |
|---|--|
| [1] Cardog identity register, decoded from the VIN | [4] Cardog market quote, same model year, 7 live listings, as of 28 Oct 2026 |
| [2] Transport Canada recall database, listed for the model year | [5] Live public dealer listings on Cardog, as of 29 Oct 2026 |
| [3] NHTSA recall records (United States), listed for the model year | |

STATEMENT OF SCOPE

This record is what public sources held about this vehicle when Cardog read it, each fact cited to its source. It read the VIN decode, Transport Canada's recall listing, NHTSA's recall records, Cardog's market quote and live public dealer listings. Recalls are listed for the model year, not checked against this VIN; the manufacturer confirms which apply. It is not a vehicle history or ownership report, and it carries no owner information.
