2 recalls listed by Transport Canada for this model year

Airbag

2018011 8 Jan 2018

On certain vehicles, long-term exposure to high absolute humidity and temperature, combined with high temperature cycling, could eventually degrade the propellant contained in the passenger frontal airbag. This could cause the airbag to deploy with more force than normal. As a result, if the vehicle were involved in a collision that warrants airbag deployment, fragments could be propelled toward vehicle occupants, and the airbag assembly could be damaged, preventing proper function. These issues could increase the risk of injury. Correction: Dealers will replace the passenger frontal airbag module. Note: Canadian climate results in the propellant degrading slowly. The recall is being conducted as a precaution to address future risk, and is expected to replace the passenger frontal airbag module before their function would be affected.

Brakes

2015029 26 Jan 2015

On certain vehicles, The front brake hoses may rupture. This could cause a loss of front brake function, causing increased brake pedal travel and reducing braking performance. This could result in increased stopping distances and result in a crash causing injury and/or damage to property. Correction: Dealers will replace the front brake hoses.
