2 recalls listed by Transport Canada for this model year

Brakes 2021490 6 Aug 2021

Issue: On a small number of vehicles, a defective bolt may restrict fluid pressure to the brake caliper. As a result, there may be no braking on one wheel. If your vehicle has this problem, you may notice reduced braking, or feel the vehicle pull to the left or right while braking. Safety Risk: Reduced braking could increase the risk of a crash. Corrective Actions: McLaren will notify owners by mail and instruct you to take your vehicle to a dealer to inspect the brake hose banjo bolt on each brake caliper. The bolts will be replaced, if required.

Fuel system 2020183 28 Apr 2020

Issue: On certain vehicles, the foam pad between the floor and the fuel tank could retain moisture. Over time, this moisture could cause corrosion to the tank and result in a fuel leak. Safety Risk: A fuel leak can create the risk of a fire. Corrective Actions: McLaren will notify owners by mail and instruct you to take your vehicle to a dealer to remove the foam pad from the floor panel of the vehicle. Dealers will also inspect the fuel tank, and repair or replace it as necessary.
