2 recalls listed by Transport Canada for this model year

Structure

2026364 24 Jul 2026

Issue: On certain vehicles, moisture could enter the driver-side door lock microswitch and cause it to corrode. As a result, the microswitch may fail to automatically engage the parking brake and/or the auto park feature when the door is opened. If this happens, the vehicle could roll away.

Note: This problem could also cause the radio and/or interior lights to remain on after exiting the vehicle. Safety Risk: A parked vehicle that rolls away could create the risk of an injury or a crash. Corrective Actions: To reduce the safety risk, Mercedes-Benz recommends that you should always use the parking brake when you park. Mercedes-Benz will notify owners by mail and advise you to take your vehicle to a dealership to replace the driver-side door lock.

High voltage

2024455 9 Aug 2024

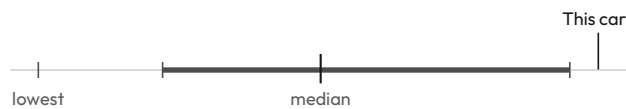

Issue: On certain vehicles, the pyro fuse housing may not have been manufactured properly. As a result, the pyro fuse could loosen and cause damage to the electrical wiring. If this happens, there could be a loss of power to the wheels. Additionally, the pyro fuse may not work during a crash or part of the fuse could detach and be propelled towards the driver's feet. UPDATE - After Mercedes-Benz notified Transport Canada about this problem, they determined that there are no Canadian vehicles affected by it. Accordingly, this safety recall was withdrawn. Safety Risk: There is no safety risk, as there are no Canadian vehicles affected by this problem. Corrective Actions: This is not a recall. This notice was published for information only.
