2 recalls listed by Transport Canada for this model year

Structure

2022455 3 Aug 2022

Issue: On a small number of Q5 Sportback and SQ5 Sportback models, the rear hatch lid may not have been manufactured correctly. As a result, the latch could break or detach in a crash and allow the rear hatch to deform more than it is designed to. Safety Risk: A rear hatch that deforms too much during a crash could lead to an increased risk of injury. Corrective Actions: Audi will notify owners by mail and instruct you to take your vehicle to a dealership to replace the rear hatch lid.

Electrical

2021740 9 Dec 2021

Issue: On certain vehicles, if you spill liquid on the rear seat, or drive through heavy rain or deep water, the gateway control module could be damaged. If this happens, the vehicle may enter emergency mode and suddenly lose power to the wheels. Note: The power steering and braking systems will continue to work. You may also see warning messages on the instrument panel when this happens. Safety Risk: A sudden loss of power to the wheels may increase the risk of a crash. Corrective Actions: Audi will notify owners by mail and instruct you to take your vehicle to a dealer to install a protective cover on the gateway control module and seal an underbody seam, as necessary.

Listed for the model year, not checked against your VIN. Audi confirms which apply.
