3 recalls listed by Transport Canada for this model year

Electrical 2018174 11 Apr 2018

On certain vehicles equipped with a 2.0L TFSI engine, the electric coolant pump could experience a short circuit and/or overheat. A short circuit or overheating of the pump could increase the risk of a fire causing injury and/or damage to property. Correction: Dealers will unplug the electric coolant pump and update the coolant pump software to mitigate the risk of fire as an interim measure. When parts become available, dealers will replace the electric coolant pump, and install an updated coolant pump software.

Electrical 2017483 6 Oct 2017

On certain vehicles, the contacts within the electrical connector of the auxiliary heater could corrode. This could cause the auxiliary heater to fail and/or cause the wires to overheat and melt. If the wires were to melt, it could lead to an open circuit and/or overheating, which could increase the risk of a fire causing injury and/or damage to property. Correction: Dealers will replace the auxiliary heater and update vehicle software as necessary.

Engine 2017002 4 Jan 2017

On certain vehicles equipped with a 2.0L TFSI engine, the coolant pump could become blocked by debris from the cooling system. This could lead to the pump overheating and could increase the risk of a fire causing injury and/or damage to property. Correction: Dealers will update vehicle software which deactivates the power supply to the coolant pump if the pump becomes blocked with debris. The driver will be notified of the blocked coolant pump through the illumination of the Electronic Power Control (EPC) lamp.
