4 recalls listed by Transport Canada for this model year

Electrical 2018174 11 Apr 2018

On certain vehicles equipped with a 2.0L TFSI engine, the electric coolant pump could experience a short circuit and/or overheat. A short circuit or overheating of the pump could increase the risk of a fire causing injury and/or damage to property. Correction: Dealers will unplug the electric coolant pump and update the coolant pump software to mitigate the risk of fire as an interim measure. When parts become available, dealers will replace the electric coolant pump, and install an updated coolant pump software.

Fuel system 2017611 6 Dec 2017

On certain vehicles, the fuel line may weaken and leak over time due to an issue during the manufacturing process. This could result in a fuel leak, which in the presence of an ignition source, could result in a fire causing property damage and/or personal injury. Correction: Dealers will replace the affected fuel line.

Engine 2017002 4 Jan 2017

On certain vehicles equipped with a 2.0L TFSI engine, the coolant pump could become blocked by debris from the cooling system. This could lead to the pump overheating and could increase the risk of a fire causing injury and/or damage to property. Correction: Dealers will update vehicle software which deactivates the power supply to the coolant pump if the pump becomes blocked with debris. The driver will be notified of the blocked coolant pump through the illumination of the Electronic Power Control (EPC) lamp.

Fuel system 2016429 2 Sep 2016

On certain vehicles, the under hood fuel hose may degrade, which could result in a fuel leak. Leaking fuel, in the presence of an ignition source, could lead to a fire causing injury and/or damage to property. Correction: Dealers will replace the under hood fuel hose and the in-tank fuel pump.
