1 recall listed by Transport Canada for this model year

Certain vehicles may have been programmed with incorrect software calibration data during the manufacturing process. This could affect various functions such as: The electric fuel pump may not receive a signal which, in case of a crash, may prevent the fuel pump from disconnecting as designed; The maximum speed limiter may not be activated; The fuel gauge readings may be incorrect; A stuck fuel-level sensor may not be displayed in the instrument cluster; The speedometer may be out of tolerance which, as a result, may indicate inaccurate vehicle speed; The On-Board Diagnostic (OBD) system may reduce the emission level applicable to the vehicle, causing the Check Engine Light to illuminate incorrectly. Correction: Dealers will reprogram the electronic control module.
