Steering

2012029 30 Jan 2012

On certain vehicles, the electro-hydraulic power steering pump could fail temporarily or permanently due to problems with the electronics that control the function of the pump, a failure of the pump cooling fan, or a loss of power to the pump. A vehicle experiencing a loss of steering power assist would revert to a manual steering mode which would require greater driver effort, especially at low vehicle speeds. Nevertheless, a loss of steering power assist could ultimately result in a crash causing property damage and/or personal injury. Correction: The electro-hydraulic power steering pump, as well as the pump cooling fan, will be subject to special extended warranty coverage of 12 years or 200,000 km from first in-service date of the vehicle.

Other

2004243 13 Jul 2004

On certain vehicles, the flat tire monitoring system's programming could contain a defect. Specifically, an audible signal (single gong) that is used, in part, to alert the driver to a flat tire, has not been correctly programmed. In the event of a flat tire, the audible signal will not sound. Also, the system's indicator lamp will illuminate, but contrary to the description in the Owner's Manual will not flash. Correction: Dealers will reprogram the instrument cluster.
