2 recalls listed by Transport Canada for this model year

Seats and restraints

2015147 7 Apr 2015

On certain vehicles, the front passenger seat occupant detection mat can fatigue over time. As a result, the passenger airbag could deactivate, illuminating the airbag warning lamp and the passenger airbag ON/OFF lamp. Failure of the passenger airbag to deploy during a crash (where deployment is warranted) could increase the risk of personal injury to the seat occupant. Correction: Dealers will replace the occupant detection mat. Note: This recall is an expansion of recalls 2008-307 and 2013-238.

Powertrain

2006013 16 Jan 2006

On certain vehicles equipped with a constant velocity transmission (CVT), the connection between the transmission gear selector rod and the lock plate may not have been laser-welded correctly. If the weld were to break, the gear currently engaged would remain in position. It would no longer be possible to shift transmission gear positions using the selector lever. The display for the transmission in the instrument cluster may then show a gear position that does not correspond to the actual gear position of the transmission. The potential exists for the vehicle to pull away from stop in the opposition direction to that desired, or if the vehicle was parked on an incline of sufficient grade, and the parking brake was not engaged, this could result in a vehicle rollaway condition. Correction: Dealers will inspect the transmission gear selector rod to lock plate weld and, if necessary, will replace the CVT transmission.

STATEMENT OF SCOPE

This record is what public sources held about this vehicle when Cardog read it, each fact cited to its source. It read the VIN decode, Transport Canada's recall listing, NHTSA's recall records, Cardog's market quote and live public dealer listings. Recalls are listed for the model year, not checked against this VIN; the manufacturer confirms which apply. It is not a vehicle history or ownership report, and it carries no owner information.
