4 recalls listed by Transport Canada for this model year

Accessories 2010396 8 Nov 2010

On certain vehicles, there is a possibility of overheating issues of batteries in the Garmin nüvi® 760 when certain batteries manufactured within a limited date code range are used in certain Garmin nüvi® 760 models with a specific printed circuit board (PCB) design. The interaction of these factors can, in some circumstances, increase the possibility of overheating, which may lead to a fire. Correction: Dealers will direct customers who have an affected unit to the Garmin Web site, which explains how to verify if their units are involved and includes procedures to follow for product exchange.

Other 2006311 14 Nov 2006

On certain vehicles, a combination of throttle position sensor (TPS) irregularities, a dirty throttle housing, and/or inefficient software calibration, may cause a warning lamp to illuminate and the subsequent onset of "limp home" mode. Correction: Dealers will install an electronic throttle system software upgrade in both the electronic throttle module (ETM) and the engine control module (ECM).

Electrical 2004334 14 Sep 2004

On certain vehicles, the electric cooling fan may overheat, potentially causing heat damage and, in rare instances, a fire in the engine compartment. Correction: Dealers will replace the cooling fan with an improved version.

Seats and restraints 2001090 10 Apr 2001

On certain vehicles, the rear outboard seat belt anchorage bolts may have been incorrectly tightened. Correction: Vehicles will be inspected and, if necessary, anchorage bolts will be tightened to the specified torque. .
