4 recalls listed by Transport Canada for this model year

Brakes

2022534 21 Sep 2022

Issue: On certain vehicles, the brake reservoir fluid cap may not vent properly. As a result, the braking system could leak brake fluid. If this happens, there could be a partial or total loss of braking. Safety Risk: Reduced braking or a loss of brakes can increase the risk of a crash. Corrective Actions: Ferrari will notify owners by mail. Ferrari will send you a second notice once the repair parts are available. Ferrari advises that if the "Low Brake Fluid" warning message appears on the vehicle dashboard, you should pull off the road as soon as it is safe to do so. You should then contact Ferrari Roadside Assistance and get towed to the nearest dealer.

Airbag

2019289 12 Jun 2019

Issue: On certain vehicles, the airbag electronic control unit (ECU) could be damaged by an electrical fault. This could cause the airbag system not to work properly in a crash. It could also result in a deployment of the airbags and/or seat belt pretensioners without a crash. Safety Risk: Airbags that do not work properly in a crash could create an increased risk of injury. Airbags or seat belt pretensioners that deploy without a crash could create a risk of injury and also increase the risk of a crash. Corrective Actions: The company will notify owners by mail and instruct them to take their vehicle to a dealer to replace the airbag ECU.

Airbag

2019011 10 Jan 2019

Issue: On certain vehicles, long-term exposure to high absolute humidity and temperature, combined with high temperature cycling, may eventually degrade the propellant contained in the passenger-front airbag. This could cause the airbag to deploy with more force than normal. If the airbag inflator ruptures, fragments could be propelled toward vehicle occupants or cause damage to the airbag assembly, preventing its proper function. Safety Risk: If the vehicle is involved in a crash requiring an airbag deployment, the airbag inflator could rupture and create a risk of injury. Corrective Action: Owners will be notified by mail and instructed to take their vehicle to a dealer to have the passenger-front airbag module replaced. Note: The Canadian climate results in the propellant degrading slowly. This recall is being conducted as a precaution to address future risk. It is expected that all airbag inflators will be replaced before their function would be affected.

Fuel system

2016002 5 Jan 2016

On certain vehicles, a defect in the fuel pump low pressure feed line could cause a fuel vapor leak. Leaking fuel vapor in the presence of an ignition source could result in a fire causing injury and/or damage to property. Correction: Dealers will install a revised low pressure fuel line assembly. Note: None of the affected vehicles have been retailed to customers.

Listed for the model year, not checked against your VIN. Ferrari confirms which apply.

Check your VIN with Ferrari or call a Ferrari dealer with your VIN.

SOURCES

- | | |
|---|--|
| [1] Cardog identity register, decoded from the VIN | [4] Cardog market quote, same model year, 1 live listings, as of 28 Oct 2026 |
| [2] Transport Canada recall database, listed for the model year | |
| [3] NHTSA recall records (United States), listed for the model year | [5] Live public dealer listings on Cardog, as of 28 Oct 2026 |

STATEMENT OF SCOPE

This record is what public sources held about this vehicle when Cardog read it, each fact cited to its source. It read the VIN decode, Transport Canada's recall listing, NHTSA's recall records, Cardog's market quote and live public dealer listings. Recalls are listed for the model year, not checked against this VIN; the manufacturer confirms which apply. It is not a vehicle history or ownership report, and it carries no owner information.
