2 recalls listed by Transport Canada for this model year

Lights and instruments

2019328 2 Jul 2019

Issue: On certain vehicles, an engine software update may have been performed incorrectly. This could cause trouble codes to not be stored when the ignition key is turned off. If a fault was present, this could cause a warning lamp not to light up the next time the engine is started. Safety Risk: A warning lamp that does not turn on may not provide a driver with important information about vehicle safety systems. This could increase the risk of a crash. Corrective Actions: The company will notify owners by mail and instruct them to take their vehicle to a dealer to update the engine software. Note: This is an expansion of recall 2018-662.

Lights and instruments

2018662 29 Nov 2018

On one vehicle, an engine software update may have been performed incorrectly, causing diagnostic trouble codes to not be stored when the ignition key is turned off. If a fault was present, this could cause the warning lamp not to light when the engine is next started. This could create a situation where the driver is not provided with important information about vehicle safety systems, which may increase the risk of a crash causing injury and/or property damage. Correction: Dealers will update the engine software. Note: This recall is superseded by recall 2019328. Please see <http://www.wapps.tc.gc.ca/Saf-Sec-Sur/7/VRDB-BDRV/search-recherche/detail.aspx?lang=eng&&rn=2019328> for more information.
